

The fifth generation – anliker GSM 5

Available now: During the last few months we have completely renewed the entire Anliker product range. We are proud to present you our new “Stars”:

These are the News (machine base):

Completely manufactured in massive casted stainless steel! Therefore any detergent can be used for cleaning. The cutting head can be cleaned and sanitized in the warewashing machine. Supports actively the HACCP system!

Attractive and modern design, upgraded ergonomic handling.

The rotating hopper of the “Star” version has now the shape of a flower and a much increased volume to cut more Brunoises and Gaufrettes at a time.

The kidney shaped hopper is enlarged by 20 % (more vegetable can be filled at a time = higher capacity).

New hinge-pusher-system for even easier and simpler cleaning.

Ergonomic handle on the backside to carry the machine.

An equal sidelength W 20 cube (20x20x20 mm) will be available as from spring 2009.

These are the News (blades/cuting discs):

The complete range of Anliker accessories has been renewed. All cutting discs come now in high tech glass fiber compound. This material is mechanically stronger than aluminium or sheet metal. It is chemical and high temperature resistant.

These are the unique advantages of the new high tech material:

- More hygienic due to improved design
- Can be cleaned in the warewashing machine
- No mechanical wear of the disc body, longer lifespan.
- No surface corrosion (biggest disadvantage of aluminium blades). The new blades will not corrode or discolour!
- The material is inherently stable and therefore better than sheet metal. It will not deform and always be true running.
- Lower weight - easier handling
- Attractive cutting disc exchange program
- Of course compatible to all old Anliker models
- Antimicrobial protection: We succeeded to embed an anti-microbial protection into the matrix of the glass fiber compound. The use of latest technologies made this sensation possible. Independent laboratory analysis proof that evil bacterias such as E-Coli or Staphylococcus Aureus will be inactivated or even killed within 24 hours. This is a world sensation and therefore already registert for patent.

The big star – anliker GSM Volume

Replace its successful predecessor GSM 88/90.

These are the News:

- complete lower body in stainless steel
- Planetary gear box
- Motor single- 750 W or triphase 750 W
- new hinge-pusher-system
- easier handling
- massive weight reduction
- considerable price reduction
- new shaving cut blade
- new Combo cube grid
- very attractive reseller conditions
- lower sales price (compared to GSM 88/90)

The royal league - anliker GSM Multicut

Following the benefits of the new anliker Multicut:

The entire food zone is coated with a durable ceramic film. It can be cleaned with all detergents. The surface is protected from corrosion or oxidization and includes all advantages of stainless steel.

Standard the new anliker Multicut comes with an emergency switch and an integrated disc storage drawer that holds 6 blades. Wherever you move the machine, the blades will always come along and be stored safely.

The pusher-hinge-system has been simplified for easier, faster and more efficient cleaning.

anliker Information through the Internet

On our webpage www.brunner-anliker.com or www.anliker5.com you can find the following information about the new range of anliker products:

- New leaflet anliker GSM 5 in d/f/i/e
